

99% or 1%

by Rev. Joe Dirt - Wednesday, November 30, 2011

Like trite old saying, if you have to ask...it is a good bet you are not a 1%.
This is a little tool found on the Wall Street Journal site.

“The calculator above shows where your income stands on the wide range of the 99%. An annual salary above \$506,000 puts you in the top 1%, while you need to make less than \$2,500 a year to be in the bottom 1%. Where do you stand?”

[What Percentage are you in?](#)

It can be argued that household wealth would be a better gauge than household income, but this does give a sense.
